

Anti-shrinkage hole leveling agent

RF-7503

Features and advantages:

This product is used to control the surface tension of liquid phase materials, can effectively reduce the surface tension of the coating, promote leveling, improve wettability. Excellent anti-shrinkage performance, perfect solution to coating surface pinholes, oil pits, fish eyes and other paint diseases and has excellent compatibility, especially suitable for high light system.

1. this product in most systems, to solve the anti-shrinkage hole should not be a problem
2. excellent anti-shrinkage porosity, leveling, wetting
3. Excellent compatibility, does not affect the transparency of the coating in the highlight system
4. especially suitable for radiation curing system

Product specification:

appearance	Colorless to light yellow transparent liquid
Active ingredient	100%
Viscosity (mPas, 25°C)	300-500.
ingredient	Special modified polysiloxane

Applications: oil-based system, solvent-free two-component system.

Recommended dosage: 0.1-1.0% of the total formula

Usage: It can be added at any stage in the production process. In order to facilitate the addition can be diluted with a suitable solvent

Packing: 25KG/ barrel, 200KG/ barrel
