

UV special smooth feel agent

RT-3076

Features and advantages:

This product is a product specially developed to improve the smooth and smooth feel of the surface of the UV system. Wettability compatibility has a good performance, will not cause shrinkage, oil pit and other diseases. And have a certain defoaming function,

- 1, UV system, can improve the UV coating surface smooth and smooth feel, more suitable for matte system
- 2, good compatibility, wettability, leveling, and has a certain defoaming, anti-shrinkage porosity.
- 3, can be used alone in the coating, can also be used with other organosilicon additives.

Product Specifications:

appearance	Colorless to light yellow liquid
Active ingredient	100%
Viscosity (25°C, mPa.S)	1000-2500.
Water solubility	Dispersible in water
ingredient	Polyether modified silicone polymer

Application: UV system, oil-based system, water-based system is best to use hydrophilic solvent

Recommended dosage: 0.5-3% of the total formula

Usage: polyether modified silicone polymer

Packing: Net weight 25Kg/ barrel, 200kg/ barrel.
