

Dispersant

RD-9715

Features and advantages:

RD-9715 is a polymer dispersant, which is widely used in UV offset printing ink and coating system. It has excellent grinding and dispersing effect on carbon black, organic pigment and matting powder. Especially for a variety of packaging ink system dispersed high surface carbon black and organic pigments, has a very good viscosity reduction effect.

Product specification:

appearance	Light yellow particle
Specific gravity	1.09g/cm ³
Effective portion	100%

Scope of application:

1. All kinds of UV packaging ink system dispersion grinding carbon black and organic pigments, matting powder;
2. Disperse and grind carbon black and organic pigments in industrial paint, wood paint, plastic paint and other systems.

Recommended dosage:

Organic pigment	7-15%
-----------------	-------

Low surface carbon black	10—20%
High surface carbon black	40—80%

Usage :

First, the RD-9715 was dissolved in the mixture of grinding base, and then the pigment was added for grinding.

Packaging: 25KG non-recycled blue plastic bucket. The product is not completely used before, after use need to tighten the lid.

Storage: Keep away from fire source and light source and keep away from light.

Note: Please carefully evaluate before use, suitable for matte furniture paint, can also be suitable for bright light.
